

Telecom

**High
efficiency
specialized
services.**

To be always ahead in an industry where technology advances so rapidly, we must rely on quick, modern and efficient solutions. Clemar offers specialized services including design, deployment and management since the search for the ideal place to final delivery. The company also provides vertical structures and performs the respective assemblies.

Site implantation:

- Feasibility of sites for deployment (acquisition)
- Full License Process
- Preparation of site survey and executive projects
- Urbanization and access
- Improvement and extension of electricity network
- Power input and ground system
- Vertical structure Foundation for antennas support
- Supply and assembly of structures for antennas support and shelters for equipment
- Structural reinforcement of vertical structure and foundation
- Radiating system installation (RF)

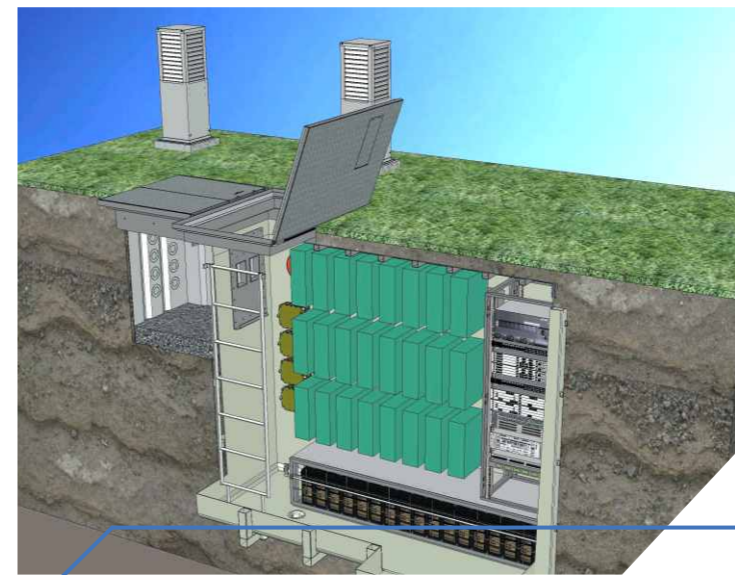

Underground Shelter

Airtight, underground, self elevated and ventilated system

Mini Shelter

Compact, airtight and ventilated system

CelBox

Airtight, underground and ventilated system

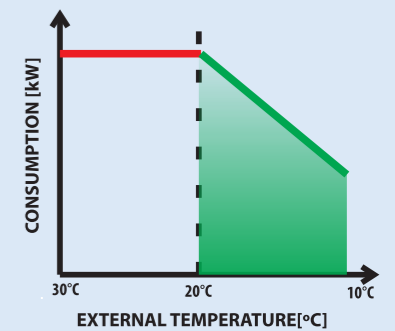

Integrated Container

Complete infrastructure, equipped with AC power, DC power, alarm, fire extinction system and air conditioning

Agile solutions to an increasingly dynamic sector

Enthalpy system

CelPoste

Shelter in mast to purpose to house equipment inside, discreetly and safely

Integrated Mini Data Center

Compact, modular and customizable

Buildings for equipment and vertical structures:

- Executive projects
- Civil engineering (and reform)
- Power AC, DC and emergency (Motor-Generator)
- Grounding System and Fire Alarm and Detection
- Air Conditioning
- Automation
- Access control and internal TV
- Supply and installation structures for antennas
